### Introducing j5 International

j5 International, a leading supplier of Operations Management Software, has been a Schneider Electric CAPP Partner since 2016. j5 International is dedicated to the industrial operations field and assists companies to optimize efficiency and coordination. Their products are used in almost every industrial setting and j5 Applications are currently used in refineries, LNG plants, upstream oil and gas assets, pipelines, petrochemical facilities and power generation plants across the world.

### Total Services

j5 International recognizes that comprehensive knowhow is necessary to ensure an optimized, operations management solution. We also know that consultation, support and training requires more than just a general understanding of our products, technologies and market trends. It requires a solid understanding the j5 suite applications and the ability to provide the type of support that is needed – when and where it is needed.

### Total Systems

The j5 Operations Management System (OMS) consists of the j5 Framework and configured applications that are built on that Framework.

All of the applications listed above are eligible for the CAPP Program.

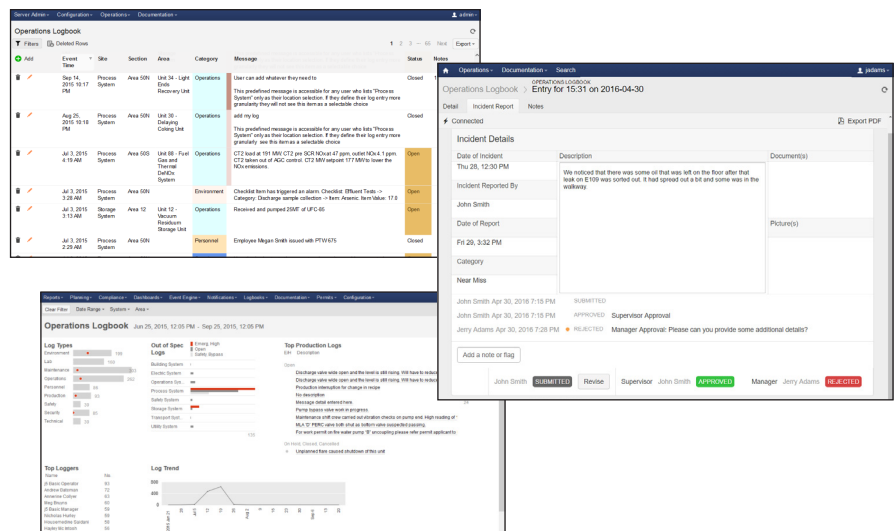

The suite of j5 Operations Products provide the client with a single application, single user experience to manage many of the typically manual and people-based operational business processes. Some of the processes require integration with other process automation systems of record, including Schneider Electric systems and the j5 software facilitates an integrated experience.

Integration with the Schneider Electric has been through software offerings, typically through integration to System Platform GR Access using our standard OPC integration as well as through a customized interface to System Platform and the Wonderware Historian.

The j5 OMS has been designed to provide a pre-configured set of operations business applications that can be additionally configured and customized to meet the specific requirements of the client. This additional configuration is accomplished using a j5 application (Integrated Development Environment) that allows for off-site configuration by third party entities or the client with delivery of changes through a standard installation package. The application architecture also facilitates a segregation between the 1) Framework, 2) Applications and 3) Site Customization so that newer versions of the Framework and Applications can be delivered to the client without affecting any site customizations previously deployed.

### Total Solutions

j5 International is fully committed to working with our clients to be able to deliver tailored solutions to meet their business process needs and the architecture of the j5 OMS along with our years of experience working across a number of vertical markets makes this commitment achievable. The j5 International experience and working relationship with Schneider Electric over the past 10+ years on deployment of highly integrated and complex configurations of j5 working directly with the Schneider Electric project teams also speaks to our capability to confidently execute on future projects.

The image displays several screenshots of the j5 OMS software interface. The top-left screenshot shows the 'Operations Logbook' with a table of events including dates, times, areas, and categories. The top-right screenshot shows an 'Incident Report' form with fields for incident details and a list of users. The bottom-left screenshot shows a 'Log Trend' graph with various data series. The bottom-right screenshot shows a 'Top Production Logs' table with columns for log type, log ID, and description.

Markets served

● Primary sectors of activity    ● Secondary sectors of activity

End user					OEM					
Food & Beverage	Water/Wastewater	Oil & Gas	Mining, Minerals & Metal	Power/Electrical Energy	Hoisting	Lift	Packaging	HVAC & R	Conveying	Textile

Areas of expertise

Operations Management Software      Process Safety Software      Integrated Enterprise Applications

Authorized CAPP products

Authorized CAPP products	Product description	For more information
<b>Manual Logging of Operations Events</b>	The j5 Operations Logbook allows operations teams to record, manage and view any event in a consistent and efficient way with a web browser.	<a href="https://www.j5int.com/j5-operations-logbook/">https://www.j5int.com/j5-operations-logbook/</a>
<b>Shift to Shift Communication</b>	j5 Shift Handover allows personnel to communicate and transfer shift information in a consistent, efficient way with a browser based web application.	<a href="https://www.j5int.com/j5-shift-handover/">https://www.j5int.com/j5-shift-handover/</a>
<b>Operations Task Management</b>	j5 Work Instructions allows operations teams to manage Work Instructions in a consistent and efficient way using a browser based web application.	<a href="https://www.j5int.com/j5-work-instructions/">https://www.j5int.com/j5-work-instructions/</a>
<b>Operational Orders</b>	The j5 Standing Orders application overcomes the limitations of the whiteboard approach while adding additional benefits to the process plant.	<a href="https://www.j5int.com/j5-standing-orders/">https://www.j5int.com/j5-standing-orders/</a>
<b>Responding and reporting on events captured by other plant real-time systems</b>	The j5 Event Manager ensures that all events are properly recorded and the correct workflows are put in place.	<a href="https://www.j5int.com/j5-event-manager/">https://www.j5int.com/j5-event-manager/</a>
<b>Follow-up or Corrective Actions</b>	The j5 Action Management application allows users to Assign, Define, Manage and Track actions.	<a href="https://www.j5int.com/j5-action-management">https://www.j5int.com/j5-action-management</a>
<b>Documented Management of Change</b>	j5 Management of Change is used to identify all dangers through a consistent, formal procedure before the changes can be implemented.	<a href="https://www.j5int.com/j5-management-of-change/">https://www.j5int.com/j5-management-of-change/</a>
<b>Work Permitting System</b>	j5 Permit to Work allows consistent procedures when issuing and controlling Work Permits.	<a href="https://www.j5int.com/j5-permit-to-work/">https://www.j5int.com/j5-permit-to-work/</a>
<b>Incident and Near Miss Management</b>	j5 Incident Management allows every near miss or incident to be investigated vigorously and thoroughly to improve safety on site.	<a href="https://www.j5int.com/j5-incident-management/">https://www.j5int.com/j5-incident-management/</a>
<b>Inspection Rounds, Operations Logbook and Standing Orders</b>	j5 Mobile allows personnel to manage operations without having to return to their desks.	<a href="https://www.j5int.com/j5-mobile-applications/">https://www.j5int.com/j5-mobile-applications/</a>
<b>Operator Rounds</b>	An industrial strength mobile Inspection Rounds system that uses industry standard devices based on popular operating systems.	<a href="https://www.j5int.com/j5-inspection-rounds/">https://www.j5int.com/j5-inspection-rounds/</a>
<b>Compliance Tracking</b>	j5 Compliance Management allows various operations personnel within an organization to manage compliance duties efficiently and consistently.	<a href="https://www.j5int.com/j5-compliance-management/">https://www.j5int.com/j5-compliance-management/</a>
<b>Suite of Visual Reporting Tools</b>	The j5 system allows users to deploy Dashboards and Reports across all of the j5 Applications and beyond.	<a href="https://www.j5int.com/j5-dashboards-and-reports/">https://www.j5int.com/j5-dashboards-and-reports/</a>
<b>Properly Manage j5 Configuration and Customization</b>	The j5 Integrated Development Environment (IDE) provides easy access to a number of powerful j5 configuration and customisation options.	<a href="https://www.j5int.com/j5-integrated-development-environment-ide/">https://www.j5int.com/j5-integrated-development-environment-ide/</a>
<b>j5 System Platform, trigger actions, handovers and reports</b>	j5 works together with the System Platform from Schneider Electric to gather data from different systems.	<a href="https://www.j5int.com/j5-applications/j5-interfaces/">https://www.j5int.com/j5-applications/j5-interfaces/</a>
